

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	8-03-2026
Team ID	699ee17ef292113d819d8e62
Project Name	Predictive Pulse: Harnessing Machine Learning for Blood Pressure Analysis
Maximum Marks	4 Marks

Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

During the brainstorming session, the team discussed various healthcare problems that can be solved using machine learning. After evaluating

Before We Collaborate

Before starting the brainstorming session, each team member researched common healthcare problems that could be addressed using data analysis and machine learning. We explored topics such as heart disease prediction, diabetes detection, and blood pressure monitoring. After reviewing

Hypertension is a major health concern worldwide and often remains undetected until serious complications occur. Traditional monitoring methods only measure current blood pressure levels and do not provide predictive insights. Therefore, there is a need for a machine learning-based

Brainstorm, Idea Listing and Grouping

Idea List • Predict hypertension using machine learning models • Create a system to analyze patient health data (age, BMI, heart rate, lifestyle) • Develop a dashboard to visualize blood pressure trends • Provide early warnings for high blood pressure risk • Generate personalized health recommendations • Integrate health monitoring with wearable device data • Use data visualization to help users understand BP patterns	Grouping of Ideas Data Analysis • Health data collection • Feature analysis and preprocessing Machine Learning • Hypertension risk prediction • Classification models (Logistic Regression, Decision Tree, Random Forest) User Interface • Dashboard for BP visualization • Alerts and notifications Healthcare Insights
